

The Global Need for Pediatric Imaging

During the course of their intensive neonatal care, 37–54% of preterm babies contract a potentially blinding eye disorder known as Retinopathy of Prematurity (ROP). Unless early intervention is carried out, **7–15% of these babies are at risk of going blind.**

130 m*
babies are
born each year

Approx
15 m
are born
preterm

Of these,
>3.5 m
preterm births
are recorded in
India alone

Further, retinoblastoma is the most frequent neoplasm of the eye, accounting for 3% of all childhood malignancies. Globally, nearly 1 in 15,000 children develop retinoblastoma and 8,600–9,000 children are newly affected each year.**

The need of the hour is an affordable, wide-field imaging solution to screen, evaluate, and photo-document pediatric ocular diseases.

3nethra neo

High-resolution Imaging with Greater Field of View

The 3nethra neo is a compact, portable, and easy-to-use mydriatic wide-field digital imaging system used for the photo documentation of ocular diseases that manifest in infant eyes. The ergonomically designed, lightweight handpiece allows for single-handed operation, and captures 120-degree high-resolution images of the

posterior and anterior segments of the eye. The device acquires only digital photographs of the eye and does not provide any analysis or diagnosis. The contact device is easily operated by qualified clinicians and can be deployed in versatile clinical environments such as hospitals, operating rooms, and Neonatal Intensive Care Units (NICU).

Salient Features

- ✓ Integrated provision for historical data
- ✓ Intuitive controls and workflow
- ✓ Compact and ergonomic design
- ✓ Lightweight and easy to use

Digital Health Platform

Cloud-based platform for secure electronic uploading of high-resolution digital images by operators and remote review by qualified clinicians.

Digital Health Platform availability is subject to local regulatory requirements/infrastructure and therefore varies from country to country.

Innovation in Design

Unique built-in compact warm white LED-based illumination system

Innovative focusing system that enables noiseless operation

Complex and compact optomechanics to make the probe lightweight

Wide-field imaging at 120 degrees

*Lightweight, pen-holder grasp
handpiece for single-handed operation*

Delivers Objective Evidence

120-degree FOV

Photo-documentation of visual health for
medico-legal purposes

Enhances consultation, improving communication
with patients

*Photographs captured by 3nethra neo do not provide any pathological analysis or diagnosis for
treatment. The device assists clinicians in the evaluation, diagnosis, and documentation of visual health.*

Review Software

This convenient and full-screen view of the fundus images allows for easier comparison between images taken during different visits. This enables clinicians to evaluate the ocular condition's progression or regression faster.

The magnifier option aids in better analysis of the formation and tortuosity of blood vessels.

Report Generation

The report provides the photo-documentation of ocular conditions along with the findings for each eye to indicate a further course of action. The automatic segmentation of the images

to the specific image fields in the report allows the variability of the images to be characterized separately for each eye. The review software enables sharing of the report through email.
